EDUCATION

University of Florida

May 2026

B.S. in Computer Science, Certificate in Artificial Intelligence, Certificate in Project Management

GPA: 3.83/4.00

- Courses: Programming in Java/C++, Data Structures & Algorithms, UX Design, Machine Learning, Business Analytics with AI, Human-Computer Interaction, Operating Systems, Algorithm Abstraction, Databases, Statistics

EXPERIENCE

C Spire

June 2025 – Present

Associate Product Manager

Ridgeland, MS

- Brought a new device product to market through a pilot partnership with an external manufacturer, designing the pricing structure, rep incentive program, e-commerce flow, and store rollout plan for a live multi-store test.
- Led customer interviews & internal stakeholder interviews to identify pain points and define key features for new mobile plan offerings, converting findings into product requirements and roadmap decisions for launch
- Authored PRDs, business cases, PR/FAQs, & 6-pagers to align on product vision, scope, and go-to-market strategy
- Researched market opportunities and pitched new product concepts to leadership for roadmap consideration; winning approval to advance a B2B proposal through C-suite review and into the PMO Gate Review process
- Drove operational efficiency by auditing and removing legacy plans, reducing backend downstream complexity

UpLift

Sept 2024 – Feb 2025

Product Manager Intern

Tampa, FL

- Authored Product Requirements Document (PRD) for Uplift-U, defining the integration strategy for TAO Connect
- Conducted market research & competitor research in collaboration with product managers to define key product features for campus telehealth services, providing resources for over **350,000** students across **6** universities
- Defined product spec and scope for a virtual streamlined appointment scheduling system, reducing the steps in the customer journey from **9** to **4** and projecting a **50%** reduction in manual scheduling time

C Spire

June – Aug 2024, June – July 2023

2x Software Engineer Intern

Ridgeland, MS

- Created logging services with Apache Kafka to track & reprocess **2.5 million** monthly customer communications
- Implemented Java-based microservice with Kafka Producers to queue emails & SMS messages as AVRO records, establishing a log for tracking details of all sent messages and decreasing developer debugging time by **60%**
- Established Scala-based microservice to leverage Kafka Consumers for message integration into an Oracle Database, coordinating **2** database engineers and optimizing communication flow with over **1 million** customers
- Developed **6** REST APIs in Scala, reducing average call times by **59%** compared to the legacy SOAP APIs
- Directed team to design a VPN product targeting **100,000+** customers in C Spire's Home Internet & Fiber Business

LEADERSHIP & PROJECTS

Product Space | President, Senior Advisor, & Dir. of Professional Development

July 2024 – Present

- Restructured the organization by implementing communication architecture, enforcing document control, organizing weekly standups, redefining officer roles and responsibilities, and creating newly structured events
- Created **7** in-depth workshops on product strategy, product-market fit, user research, and UX design, while organizing **15** total events, including speaker sessions and designathons with industry leaders
- Oversaw **6** client projects to foster experiential learning opportunities and real-world skill application, facilitating collaboration between **20+** students and companies nationwide, strengthening industry partnerships

Computing Student Union | Secretary & Project Manager

May 2024 – July 2025

- Managed organizational operations for **24** board members across **4** teams to improve UF resources for computing students, overseeing development of CSU's products including the organizational [website](#) and research course
- Organized **4** General Body Meetings for **400+** members and collaborated with **10+** student organizations

TECHNICAL SKILLS

Languages: Java, C++, Python, Scala, SQL

Tools: Linear, Trello, JIRA, Figma, Miro, Kafka, Oracle, Git, Spring, Pandas, NumPy, Grafana, TensorFlow, Keras, Pytorch
